

Nano Refresher pro lack

Refresher for finished floors

Product Description

Nano Refresher pro lack is used for regular maintenance of finished wooden and parquet floors. *Nano Refresher pro lack* dissolves during each application, thus preventing building a thick layer of Refresher. For indoor use only.

A floor treated with *Nano Refresher pro lack* can be cleaned with a damp mop without dissolving the refresher.

If the desired look of the surface not any more can be achieved with *Nano Refresher pro lack* the floor can be recoated according to our Recoat system, see www.nanosol.se.

Preparation

The floor must be free from contamination and dust. Clean with *Nano Cleaner*. Any polish or grease residues must be removed very carefully with *Nano Polish Remover* and a sanding screen grit 120.

Application

Squirt *Nano Refresher pro lack* onto the floor directly from the bottle. Dispense it with a clean, damp mop or lint-free cloth. Do not dilute the refresher. Let dry for about 1 hour. After that the floor is ready to use.

If streaks appear it is likely that the floor earlier was treated with polish or wax. In that case it has to be cleaned with *Nano Polish Remover* and sanding screen grit 120.

Cleaning

Clean tools with water before the refresher has dried.

Health and Safety

Nano Refresher pro lack Use the normal care due when handling chemical products. Ensure good ventilation. Use protective goggles and gloves if there is any risk of splashing. If the product comes into contact with your skin, wash it off with soap and water. If the product gets into your eyes, rinse with a generous amount of water. For further information see Safety Data Sheet.
